Consumed event 8 from producer 2
Consumed event 9 from producer 2
Consumed event 10 from producer 2
Consumed event 11 from producer 2
Consumed event 12 from producer 2
Consumer terminated cleanly
Logger: 2 producer threads joined; log saved to activity.log
```

S11 | Logger thread termination

Person A: Aditi Srinivasa Murthy | PES1UG25CS032

```
Consumed event 10 from producer 2
Consumed event 11 from producer 2
Consumed event 12 from producer 2
Consumer terminated cleanly
Logger: 2 producer threads joined; log saved to activity.log
[PES1UG25CS032] ~/Downloads/campuscompute-day2$ echo $?
```

S12 | Shared-memory IPC exchange

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute ipc
echo "IPC EXIT STATUS: $?"
IPC: shared memory created: /campuscompute_shm_5174
IPC: named semaphore created: /campuscompute_sem_5174 (initial value 0)
IPC PARENT [5174]: wrote 'Hello from parent PID 5174' into shared memory.
IPC PARENT: semaphore posted to release child.
IPC CHILD [5175]: received 'Hello from parent PID 5174' via shared memory.
IPC CHILD: sent acknowledgement; counter updated.
IPC PARENT: received reply 'Acknowledged by child PID 5175'.
IPC PARENT: counter = 42 (expected 42).
IPC: child exited successfully and was reaped using waitpid.
IPC cleanup: named semaphore unlinked.
IPC cleanup: shared memory unlinked.
IPC: PASS (transfer, synchronization, and cleanup).
IPC EXIT STATUS: 0
```

S13 | Semaphore synchronization and cleanup

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute ipc
echo "IPC EXIT STATUS: $?"
ls /dev/shm | grep -E '^(campuscompute_shm_|sem\.campuscompute_sem_)' || echo "No CampusCompute IPC objects remain"
IPC: shared memory created: /campuscompute_shm_5245
IPC: named semaphore created: /campuscompute_sem_5245 (initial value 0)
IPC PARENT [5245]: wrote 'Hello from parent PID 5245' into shared memory.
IPC PARENT: semaphore posted to release child.
IPC CHILD [5246]: received 'Hello from parent PID 5245' via shared memory.
IPC CHILD: sent acknowledgement; counter updated.
IPC PARENT: received reply 'Acknowledged by child PID 5246'.
IPC PARENT: counter = 42 (expected 42).
IPC: child exited successfully and was reaped using waitpid.
IPC cleanup: named semaphore unlinked.
IPC cleanup: shared memory unlinked.
IPC: PASS (transfer, synchronization, and cleanup).
IPC EXIT STATUS: 0
No CampusCompute IPC objects remain
```

S14 | Banker's algorithm: safe case

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute banker tests/safe.txt
echo "BANKER SAFE EXIT STATUS: $?"
Banker safety check: 2 processes, 1 resource types
Available: 1
Process | Allocation | Maximum | Need
P1 | 1 |  2 |  1
P2 | 1 |  3 |  2
Assume P1 completes; Work becomes: 2
Assume P2 completes; Work becomes: 3
SAFE sequence: P1 -> P2
BANKER SAFE EXIT STATUS: 0
```

S15 | Banker's algorithm: unsafe case

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute banker tests/unsafe.txt
echo "BANKER UNSAFE EXIT STATUS: $?"
Banker safety check: 2 processes, 1 resource types
Available: 0
Process | Allocation | Maximum | Need
P1 | 1 |  2 |  1
P2 | 1 |  3 |  2
UNSAFE: no safe sequence exists for the declared maximum claims.
Unfinished: P1 P2
Unsafe is not proof that a deadlock is already occurring.
BANKER UNSAFE EXIT STATUS: 0
```

S16 | Normal worker completion

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute worker normal
echo "WORKER NORMAL EXIT STATUS: $?"
WORKER: starting normal worker demonstration.
WORKER CHILD [5269]: running.
WORKER CHILD: task completed successfully.
WORKER PARENT: waitpid reaped child 5269; exit code = 0.
WORKER PARENT: successful completion confirmed.
WORKER: PASS (fork, waitpid, and exit-status verification).
WORKER NORMAL EXIT STATUS: 0
```

S17 | Simulated worker failure

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute worker fail
echo "WORKER FAILURE TEST EXIT STATUS: $?"
WORKER: starting simulated-failure worker demonstration.
WORKER CHILD [5279]: running.
WORKER CHILD: simulating a failure (exit code 42).
WORKER PARENT: waitpid reaped child 5279; exit code = 42.
WORKER PARENT: simulated failure detected correctly.
WORKER: PASS (fork, waitpid, and exit-status verification).
WORKER FAILURE TEST EXIT STATUS: 0
```

S18 | Resource limits

Person B: Akanksha Rajiv | PES1UG25CS042

```
[PES1UG25CS042] ~/CampusCompute_Final_Verification/CampusCompute$ ./campuscompute limit
echo "RESOURCE LIMIT EXIT STATUS: $?"
LIMIT: starting resource-limit demonstration in a child process.
LIMIT CHILD [5284]: RLIMIT_NOFILE soft limit set to 16.
LIMIT CHILD: open() returned EMFILE after 13 extra descriptors.
LIMIT PARENT: resource limit was enforced; child exited and was reaped.
LIMIT PARENT: parent process file-descriptor limit was not changed.
LIMIT: PASS (setrlimit and observed EMFILE).
RESOURCE LIMIT EXIT STATUS: 0
```

S19 | Invalid command handling

Person A: Aditi Srinivasa Murthy | PES1UG25CS032

```
